

A 3-metre-wide multi-use path is proposed on the north side of Vern Dynes Way to improve park circulation and support safe pedestrian and cyclist movement. To accommodate necessary grading, 27 trees, primarily non-native or invasive species, will be removed. In their place, 35 large deciduous shade trees will be planted as part of a broader effort to enhance the parks tree canopy.

Proposed 3m Multi-Use Path and Tree Allée
